

### *Yackle-Dee-Doo Meets Mr. Lead Spot*

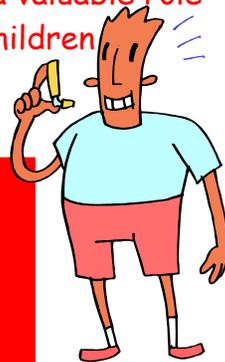

An age-appropriate {Kindergarten, Pre-K or younger} interactive puppet show that teaches children how to avoid lead-based paint hazards.

Good nutrition and proper hand washing are a big part of the show. Each child gets a goody bag, including their very own puppet!

### *Asthma Awareness Curriculum*

Asthma is the most common chronic childhood condition and a leading cause of school absences. With asthma occurring in almost every classroom, it is important to integrate an asthma lesson into the regular curriculum on body systems. This can play a valuable role in reducing the problems experienced by children with asthma when their condition is poorly understood by those around them.
